PROFILE

Data Analyst with 6 months of hands-on experience focused on extracting actionable insights from complex datasets and experience in commercial data analysis, with a strong background in Computer Science. Proven track record in developing high-impact analytical solutions, including interactive dashboards and e-commerce funnel optimization that drive informed decision-making. Expert in SQL, Python and BigQuery.

Skilled in utilizing Tableau, Power BI, and Google Analytics to create user-centric visualizations that prioritize clarity and essential metrics. Proficient in A/B testing, probability and mathematical statistics, allowing for rigorous data validation and product analysis. A proactive problem-solver, I excel in collaborative environments, delivering scalable data-driven solutions and maintainable analytical frameworks.

PROFESSIONAL EXPERIENCE

Data Analyst, NAK | 6 months

Lviv, Ukraine | 2024 – 2025

Working as a Data Analyst to optimize logistics operations and business processes through data-driven insights and automated reporting systems.

Key responsibilities:

- Extracting and manipulating large datasets using SQL and Google BigQuery to support strategic decision-making.
- Developing and maintaining interactive dashboards in Tableau, Power BI and Looker Studio for real-time monitoring of KPIs.
- Analyzing operational efficiency and identifying bottlenecks in the supply chain using Product Analysis techniques.
- Automating routine reporting processes using Python and Excel, reducing manual data entry and human error.
- Collaborating with stakeholders to gather technical requirements and translate business needs into actionable analytical tasks.
- Performing statistical analysis and A/B testing to evaluate the impact of process changes on company performance.

Selected Projects:

- Logistics Efficiency Dashboard: Created a comprehensive visualization system in Tableau that tracks delivery times and cost-per-kilometer across different regions.
- Automated Funnel Analysis: Developed a tracking model for client acquisition and retention, utilizing Google Analytics and BigQuery.
- Database Optimization: Structured complex queries in SQL to streamline data retrieval from Oracle and BigQuery databases.

Additional responsibilities:

- Designed user friendly dashboards focusing on clarity, strategic metric placement and effective color schemes.
- Analyzed E-commerce funnels, visualizing the path from site to purchase to identify conversion drops.
- Applied mathematical statistics to validate data consistency and ensure the accuracy of analytical conclusions.

PERSONAL PROJECTS

F1 Grid — Formula 1 Championship Analytics Platform

GitHub: https://github.com/StrangeX/f1-grid | Python, FastAPI, Redis, Docker, Kubernetes, Monte Carlo

End-to-end analytics service for Formula 1 driver and constructor championships. Reads live standings, calendar and race results from the Jolpica F1 API and builds a championship model: remaining points, mathematical elimination, recent form, and Monte Carlo title forecasts. Includes an optional LLM pit-wall analyst with template fallback, Redis cache, auto-refresh after races, and Docker Compose plus Kubernetes deployment manifests.

- Built APIs for standings, championship analysis, title forecast and ask-the-analyst; separate views for drivers and constructors.
- Implemented Monte Carlo remaining-season simulation for driver and constructor title probability.

- Added Redis caching, in-process poller and Kubernetes CronJob for post-race data refresh.
- Packaged with Docker Compose and Kubernetes manifests (health/ready probes, ConfigMap, Secret); GitHub Actions for image build and kubeconform.
- Fallback dataset so the application remains available if the upstream F1 API fails.

EDUCATION

Computer Science, Polish-Japanese Academy of Information Technology (PJATK)
Warsaw, Poland | 2024 – Present

Power Engineering, Lviv Polytechnic National University
Lviv, Ukraine | 2021 – 2025

Data Analyst Courses, GoIT
Lviv, Ukraine | 2023 – 2024

HARD SKILLS

Python · SQL · Oracle Database · Google BigQuery · A/B Tests · Product Analysis · Theory of Probability and Mathematical Statistics · Power BI · Excel · Tableau · Google Analytics · Docker · Kubernetes · FastAPI · Redis · Git

LANGUAGES

Russian (Native) · Ukrainian (Native) · English (Professional) · Polish (Intermediate)
